

FOR IMMEDIATE RELEASE

Germany, December 2001 – MoPilot.com, the leading WAP search engine and mobile portal, today announced its full support for the 3G initiative.

MoPilot is the first german company to provide content for the 3G roll-out on the Isle of Man. A full range of applications has been exclusively created for the 3G portal operated by MANX-Telecom/O2. 3G is the next generation of mobile internet devices. It offers the capability for high intensity, increased bandwidth applications, high colour display and potentially video and audio streaming.

"We are proud to be part of such an exciting project. From a developer's perspective, until now we have been somewhat held back by both the protocols and the limitations of the devices" said Dieter Kneffel, Chief Technology Officer at MoPilot. "However, 3G is a huge advancement. It enables us to create a far superior system, employing use of colour and detailed graphics to increase the aesthetic appeal of our products. More importantly, we now can make use of the technical advancements, facilitating us in creating more sophisticated and potentially limitless applications."

Asked about the relationship between O2 and MoPilot, Martin Tufft, Head of Applications and Services, MANX Telecom answered: "We are pleased to have MoPilot as a Partner on this Isle of Man Project which is a forefront of 3G development in Europe. We recognize the importance of offering choice for our customers. This choice is in fact, offered through the range and differentiation of the content we will provide. We believe MoPilot will help us to achieve that."

"With fast access speeds and highly capable devices, our services are undergoing a huge evolution. We strive to produce the solutions that our customers demand, and this now is possible. Contemplating the incredible array of content on the Internet today, we are clear about the potential of 3G. Therefore we are delighted to lend our full support to the technology. With the backing of major operators, our technology will be an instant success and immediately popular with the majority of cell phone users."

Concept images of ready available applications can be found at: <http://3G@MoPilot.net//>

MoPilot.com – mobile is our mission

MoPilot is the leading independent mobile community providing content for millions of mobile users worldwide since 1999. Early 2001, MoPilot has developed 3G applications and is the first german company approached by MANX Telecom in order to provide content and applications for the initial roll-out of the 3G portal.

Manx Telecom – [www.manx-telecom.com](http://www.manx-telecom.com)

Manx Telecom was formed in 1987 and is a wholly owned subsidiary of mmO2. The company holds licences to run fixed, mobile and 3G services on the Isle of Man. Manx Telecom has a high quality Internet services portfolio and is a key player in the Isle of Man.
